

# CORONA MEASURES in student housing

what if

## Housemate is getting tested

## Housemate is tested positive

Housemate with **symptoms** will await the results in **isolation**.

! Important! If the symptoms are a fever or shortness of breath, the whole house must be quarantined!

Other housemates and close contacts need to be extra aware for possible symptoms and need to be responsible with social contacts. You have been in contact with a potential Corona case after all!

The housemate who has tested positive stays in **isolation**.

Other housemates and **close contacts** need to go into **quarantine at home** and have as little contact as possible. Always keep 1.5 m distance!

Make a Corona toilet and shower!

Are you developing symptoms? Make a test appointment immediately! Make sure you **isolate** yourself as a precaution!

! People that have been in contact with a positive tested person within 1.5 meters for longer than 15 minutes within the period of symptoms or 48 h beforehand. Housemates are always close contacts!

Are you not developing any symptoms within the quarantine period? Don't do a test!

### Quarantine at home

- ! Stay at home for 10 days. This period starts just after your last contact with a person that tested positive.
- ! You can't go outside.
- ! Get other people to do groceries for you.
- ! You can sit in your garden or on your balcony.
- ! You can't have people coming over unless it is for medical purposes. (For example, a doctor, GGD).

### Isolation

- ! At least 7 days in isolation. This starts with the first day of being sick. If you recover from your symptoms, you need to stay in isolation for another 24 hours. After this, you can go outside again.
- ! You can't leave your room.
- ! Get other people to do groceries for you.
- ! Use a personal toilet and shower if possible.
- ! Get other people to bring food to your room.
- ! You can't have people coming over unless it is for medical purposes. (For example, a doctor, GGD).

### Test when?

- No symptoms → Don't test!
- Recovered from your symptoms → Don't test!
- (Mild) symptoms → Test!
